EDUCATION

Faculty of Commerce / Arabic section Major:
Accounting Department
Cairo University

Sep/2009 — May/2013

OBJECTIVE

I aim to reach the highest level of competence in a field that seeks continuous development. Reliable programmer who is passionate about leveraging experience in building and launching solutions in order to support large scale web development initiatives. I have more than 4 years of experience in designing and developing websites and corporate programs. I have experience with back-end technologies such as SQL Server, Python, Data Analysis, Database Administration, and PHP. I have experience with front-end technologies such as JavaScript and HTML.

WORK EXPERIENCE

TeData WE

Nov/2018 — Present

Senior Workforce management PHP Developer (Front end and Back End web developer)

1-WFM website:

An integrated site has been created, providing employment and solving many problems, the most important of which are:

- 1- The problem of absence and attendance, there is a tool with the click of a button, the person's data is sent at the moment to a table in a database on SQL.
- 2- The problem of requesting dental and sick leaves, with uploading copies of proof, as well as daily and time-bound permissions
- 3- The problem of displaying tables in an easy and smooth way for the employee and for colleagues in the same team, which helps in requesting the adjustment of the table under certain conditions, as well as the possibility of switching Shift with colleagues on automatic terms
- 4- The ability to upload daily tasks specific to the time and day
- 5- Reports, which are presented in two ways. The first is tables. It contains data that is displayed either daily, weekly or monthly.

The other type is graphic reports

6-It also contains a chat between one of our department employees and all employees for inquiries and complaints.

7-landing page that explains how to work on the site and how to calculate all the KPI for employees, and there is an amendment and uploading of tables, and downloading reports, tables and images on the device and other tasks and matters, and all this is reviewed, tested and developed, as I developed it

Managers have the ability to review engineers' orders and decide whether to approve or reject and follow up on their job performance, raise schedules, and they can also raise vacations and permissions to them if necessary.

This website have been upgraded three times to keep up with development
All of this changes according to the person's job grade, as the engineer has an interface that differs from the direct manager and so on.

2-knowledge base website:

The site is underway with the client. The first part has been implemented, which is to upload data for large projects, in which a large number of files have been uploaded, and every project that is uploaded can modify specific data on it, or increase or delete some information, and all of this is specified on conditions, meaning that those who can scan are the managers Only as well as there are tables in which the anointed is saved for reference
And it calculates an automatic percentage to determine the percentage of what has been reached in the projects
Work is underway on the other request, which includes reservations for computers available to employees and inventory

3- Data Scientist: Leveraged expertise in database management to optimize data storage, retrieval, and analysis for Workforce management.

Developed and implemented efficient database structures and schemas to support large-scale data processing and analytics.

Utilized SQL and other database querying languages to extract, transform, and load data from various sources for analysis.

Collaborated with cross-functional teams to define data requirements and ensure the availability and accuracy of data for data science projects.

Conducted data cleaning, preprocessing, and integration tasks to ensure data quality and reliability.

Created and maintained data pipelines and workflows to streamline data processing and analysis workflows.

Developed advanced SQL queries and stored procedures to extract insights and generate meaningful reports.

Worked closely with data scientists to interpret and analyze data, identify patterns, and develop predictive models.

Actively stayed updated with the latest trends and technologies in database management and data science.
